Cost/Schedule/Function™

Know your project will be a success from the get-go.

Osprey's proven process, specifically designed for scoping complex business processes, arms business sponsors with information they can use to support—and build—confident decisions. It's also flexible, as our clients have used it to accurately plan large and small projects across industries and technologies.

C/S/F™ is a repeatable process, optimized to deliver:

**Solution C/S/F™ Summary** provides an executive view of our findings.

Functional Business Scope highlights business drivers and value proposition and identifies success measures.

Business Object Model explains the business tier required to support the desired solution.

Effort and Estimation details commitment level project financial and resource models.

Systems Context Diagram identifies external entities, application architecture elements and system actors.

"Chunking" Iterative Analysis organizes all development efforts into an iterative, agile methodology.

CSF tackles the tough questions

For how much? → **COST**

When will it be delivered? → **SCHEDULE**

What will be delivered? → **FUNCTION**

Completely customizable

- Our number and type of use-cases are designed with your client needs in mind.
- Our development and deployment life cycle is adjustable to fit your distinct culture.
- Our iterative chunking approach creates flexibility, so that you can time releases with business events.

Ready to move forward?
