

Get to where you need to be, faster, with production-quality, ready-to-go environments.

With the cloud, a new environment can be launched in a matter of minutes—connecting your ideas with technology that moves as quickly as you do. The cloud makes it easier to innovate and develop new products and services, and helps you adjust to changing technical and business needs, reducing risk. It also provides industry-leading security, compliance and governance.

At Osprey Software, we know the cloud, inside and out. Whether it's Microsoft™ Azure, Amazon Web Services™, or Rackspace™, let us take away the stress of designing, securing and operating your cloud so you can focus on your business. We don't partner with any one provider, so we can choose the best fit for you.

Our distinctive approach sets us apart

We work with **all major cloud providers**

We offer an **integrated development process**, which considers operational environments at each phase

We offer **full lifecycle services**—from design, to build, to management

We have **global experience**, with proven deployments across North America, Europe and Asia

We understand what **compliance and security** mean for the cloud, and how to integrate them thoughtfully

We have a **veritable toolbox of reference architectures**, so we can map the right approach based on what our experience has told us will work for you

At Osprey, we're focused on creating the right environment for today, with an eye toward the future—while considering performance, cost and security—so that we can help determine the best path forward for you.

We're business-driven, and allow application and business needs to drive tech choices. We know that if it's built right, it will be easier to maintain, which simplifies things on your end—and that's something we take to heart.

But we don't just build an environment and head for the door—we emphasize our customers throughout the design, build, implementation and management phases, and stay involved to make sure you're getting everything out of the application that you had dreamed of. Plus, our management services free you up to take care of other business needs.

What we do—

Define, Design & Deploy

- Application, Requirements & Goals Assessment
- Best Practice-centered Design
- Implementation and Validation

Manage & Support, across the Full Lifecycle

- Technical Requirements Definition
- Vendor Selection
- Design & Architecture
- Development, Integration and Testing
- Operational Readiness and Turnover

Operate

- Proactive Management & Maintenance
- 24/7 Monitoring
- Optimization & Analytics

What we offer—

-  Cloud Application Framework
-  App Development & Integration
-  OAI Actionable Intelligence™
-  Strategy
-  NextGen Architecture
-  Customer Engagement Measures
-  Catalytic Project Management

CASE STUDY

We have designed, implemented and deployed a cloud environment to support COI RiskManager™, the highest-rated conflict of interest software used by world-class companies, including the World's Largest Retailer and an internationally-renowned Fast Food Retailer. Each solution was thoughtfully designed with the firm's business and security needs in mind, then tested, and we now operate those environments on their behalf—across multiple continents.

The result? We were able to get the environments they needed built and ready for customer use in significantly less time than would be required by a traditional, non-cloud environment.

At Osprey, we help clients deploy, operate, fine-tune and then take advantage of the very best the cloud has to offer.

Ready to move forward?

For more information on how Osprey can set up and confidentially operate your cloud, email sales@ospreysoftware.com or call (888) 677-7394.
